Problem Statement

Users feel overwhelmed choosing outfits, waste time, and overbuy clothes despite already owning enough.

Thesis: An AI wardrobe assistant can simplify styling, reduce clutter, and help users feel confident using what they already have.

62% spend time
each day
deciding what to wear

48% of all clothing
purchases

Market Positioning

What's Current?

60% of users want a personal stylist

98% of clothing startups die within a few years

\$26.1 billion spent on marketing in 2024

What We're Building

Brands

Partners will provide item catalogs
Commision-based payment system
Metric of Success: **\$/customer**

Users

Lumi will manage **user's wardrobes**
and will recommend items with an
upweighted distribution of partners

Who Else?

Brands

Wolf & Badger (high end)
Etsy (general)

Users

Whering (flawed UX)
Stitch Fix (no database)

Key Partners

Fashion & Retail Platforms:

Partnerships with Etsy, Shopify, Uniqlo, and Revolve to access product catalogs and trend data.

Cloud & AI Providers:

AWS / GCP for hosting, data storage, and model computation.

API & Data Partners:

Integration with Etsy API / Shopify API for curated product recommendations.

Influencers & Affiliate

Networks: Collaborate for brand awareness, user trust, and affiliate sales.

Key Activities

- Develop and train AI models for wardrobe analysis and outfit generation.
- Integrate partner catalogs for product recommendations.
- Maintain chat-based interface and user experience design.
- Gather feedback to improve outfit suggestions and personalization.

Key Resources

- Pre-trained AI & ML models (ViT-CLIP, LLMs).
- Cloud infrastructure for computation and storage.
- Fashion datasets and partner catalogs.
- Product design and data science teams.

Value Propositions

- Acts as a personal AI stylist that digitizes the user's wardrobe.
- Suggests smart outfit combinations and identifies missing pieces to complete looks.
- Allows users to upload inspiration photos and find similar trends without pushing purchases.
- Promotes sustainable fashion by helping users reuse what they already own.
- Saves time, reduces wardrobe clutter, and enhances confidence in everyday styling.

Customer Relationships

- Personalized styling chat powered by AI.
- Interactive feedback loop through likes, saves, and outfit ratings.
- Freemium-to-premium model for advanced styling, scheduling, and catalog browsing.

Channels

- Mobile and Web App: Core platform for wardrobe upload and styling.
- Partner Brand Platforms: Seamless browsing and affiliate links.

Customer Segments

- Busy professionals who want to save time deciding outfits.
- Gen Z & Millennials interested in smart, digital fashion tools.
- Online shoppers & content creators who want quick outfit matching.
- Eco-conscious consumers seeking sustainable styling options.

Cost Structure

- AI & Cloud Infrastructure: Hosting, storage, and model operations.
- Product Development: Engineering, design, and testing.
- Marketing & Partnerships: Influencer collaborations and affiliate setup.
- Maintenance & Support: Updates, bug fixes, and data management.

Revenue Streams

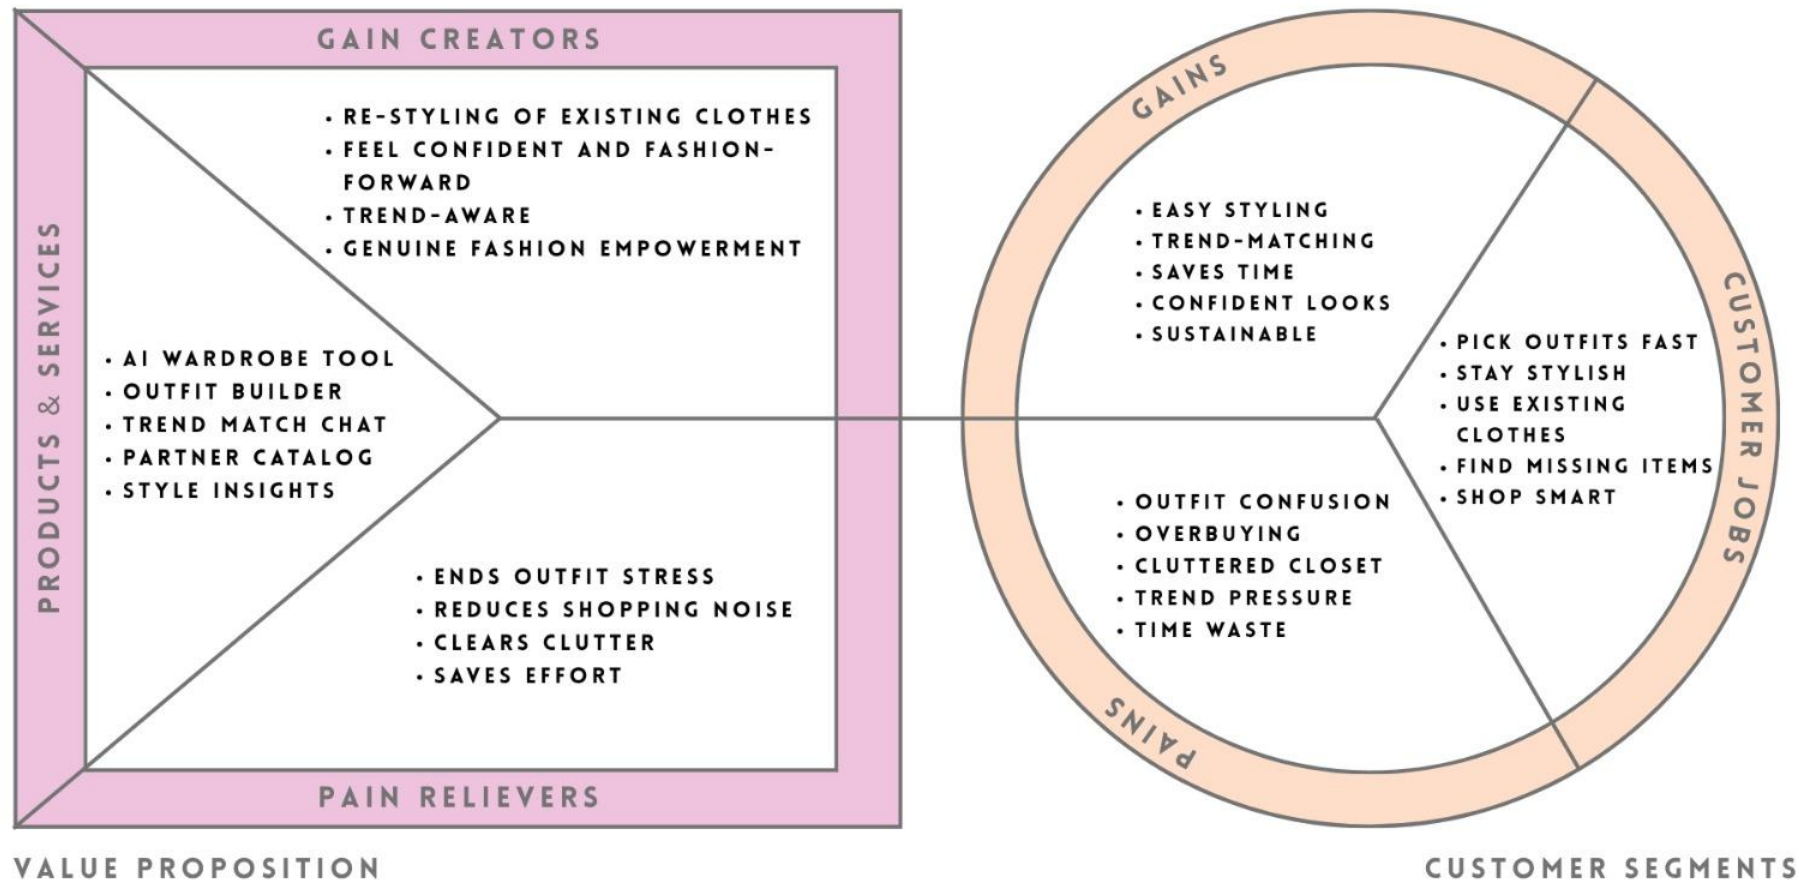

Freemium Model: Core wardrobe and outfit features are free to attract early users.

Affiliate Commissions: Earn revenue when users buy recommended items from partner brands.

Brand Collaborations: Partner with fashion retailers for sponsored collections or trend campaigns.

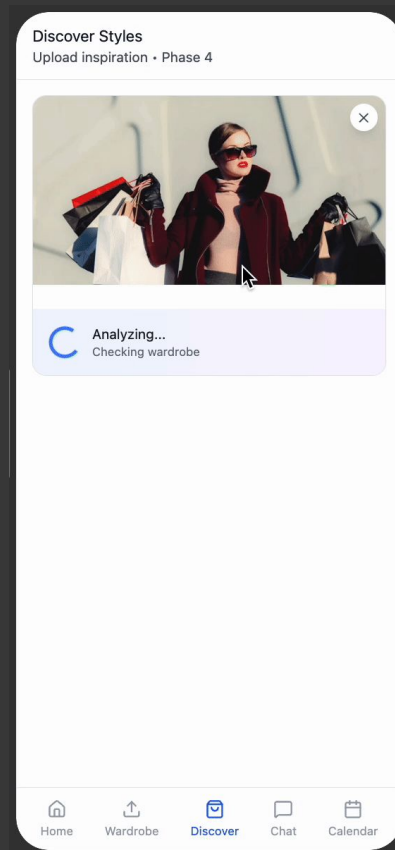

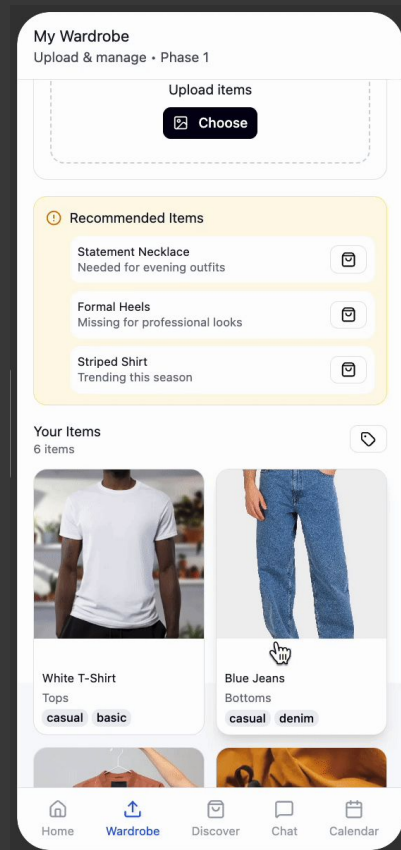

Future Add-ons: Potential to introduce premium styling or trend analytics later as the user base grows.

VALUE PROPOSITION CANVAS

Our Idea

Ingest users current wardrobe
(phase 1)

Identify items missing from
wardrobe for styles and
recommend items user can
purchase (phase 1)

Our Idea

Understand user preferences and sizing (phase 2)

Provide items user may be interested in purchasing (catalog browsing) (phase 3)

Create default outfits for user (phase 3)

Preferences
Customize profile • Phase 2

Personal Info

Height 5'7" **Weight** 150 lbs

Sizing

Tops M **Bottoms** 32

Dresses 8 **Shoes** 9

Comfort vs Style

Comfort 70% Style

Preferred Styles

Casual Formal Streetwear Bohemian

Minimalist Vintage Sporty Elegant

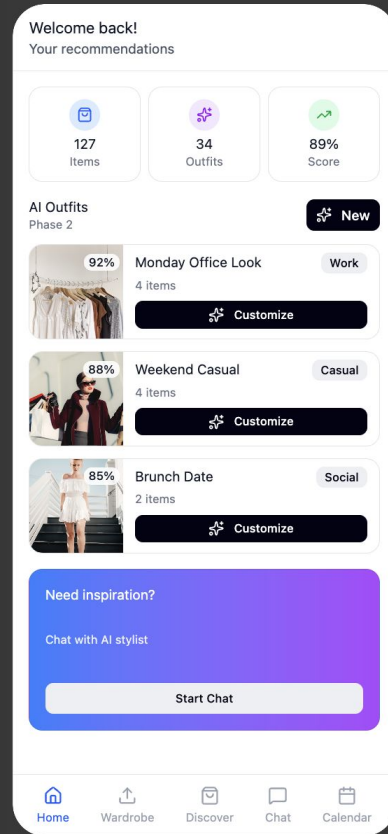

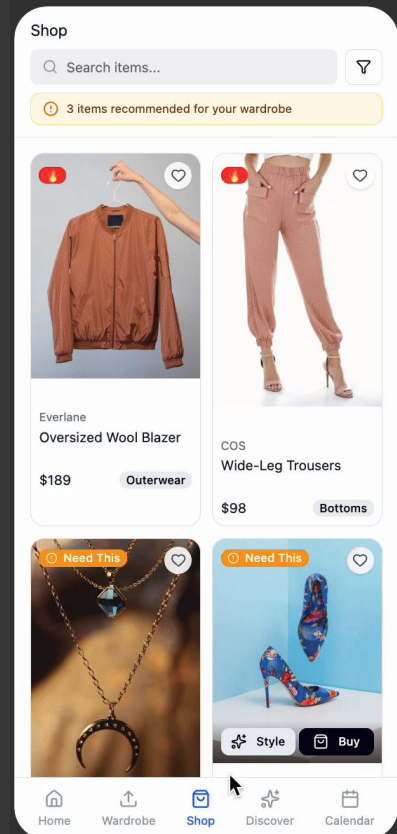

Favorite Colors

Black White Navy Beige Gray

Burgundy Olive Camel

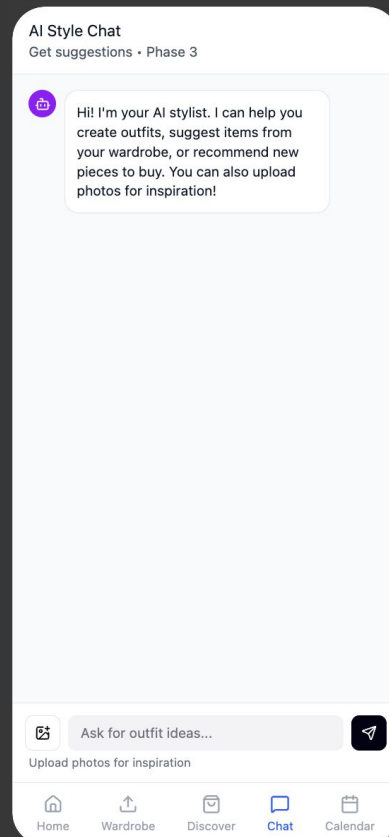

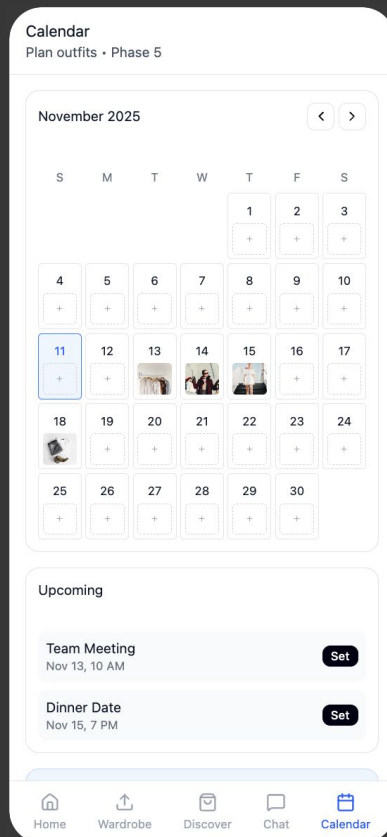

Current Trends

Oversized Blazers 95%

Our Idea

Use chat interface to make outfits upon request by user (with ability to upload photos) (phase 4)

Schedule outfits calendar style (phase 5)

Prototyping Considerations

0-1 Time

<5 minutes

Users don't want to take
photos of everything...

Multi-Modal / Input
(users, socials, etc.)

Recommendations

Can't recommend garbage

Users don't care about supporting
smaller brands, we're just
incentivizing them to

Needs a hint of novelty (if we
recommend them what they already
own, no one's gonna care)

Prototyping Phases

1. User Inputs → Semantic Understanding
2. Understand User Preferences
3. Recommendations Based on Preferences
4. Chat / Marketplace Interface
