

Weiching + Yuji

pokemon battle haptics

question

what if we
could **feel** a
pokemon
battle in
real life?

from early childhood, we always wondered what it would be like if we could **feel the pokemons** we interacted with, especially, while in a battle. With that in mind we aim at giving players some **primordial haptics** that are essential to a pokemon, enriching the game experience.

goals

could we
implement all
pokemons
into a **single**
body
wearable?
